880 Series

HVAC Room Transmitter for CO2, Relative humidity and temperature

The EE80 series combines ${\rm CO_2}$, relative humidity (RH) and temperature (T) measurement in one housing. The snap-in mounting concept stands for easy installation and replacement within seconds.

EE80 series set new standards in CO measurements for HVAC. The operation is based on the infrared principle. A patented auto-calibration procedure compensates for the aging of the infrared source and ensures outstanding long term stability.

The basic EE80 version for $\rm CO_2$ and T can be easily extended with a RH plug-in module. The well proven E+E sensor technology guarantees accurate and long term stability.

EE80 provides analogue 0 - 10V voltage outputs.

The optional display indicates sequentially the actual measuring data.

Typical Application

building management for residential and office areas ventilation control
