

GAS DETECTION SYSTEM  
Detector Tubes List

# PREPARATION

## Inspecting the pump model GV-100 before

(1) Confirm that the inlet clamping nut is firmly tightened.

(2) After confirming that the pump handle is fully in (therefore, the guide line on the pump shaft is not seen), insert a fresh unbroken detector tube into the rubber inlet of the pump.

(3) Align the guide mark (red line) on the back plate and the guide mark (▲100) on the handle.

(4) Pull out the handle fully along the red guide line on the pump shaft to the lock position, and wait 1 minute.

(5) Unlock the handle by turning it more than 1/4 turns and guide it back gradually.

(6) Confirm the handle returns to the initial position and the guide line on the pump shaft is not seen.

### △ NOTE

When the handle is unlocked, be sure to guide it back gradually by applying a little resistance. Otherwise, the handle will spring back due to the vacuum in the pump cylinder and possibly damage internal parts.

### Detector Tube

#### ■ Single tube (Example: No.1HH Carbon Monoxide)

#### ■ Twin tube (Example: No.163L Ethylene Oxide)

# OPERATION

## Simple and accurate measurements

- Insert the detector tube end straight into the tube tip breaker of the Pump.
- Rotate the detector tube so that the diamond cutter of the tube tip breaker scratches the surface of the tube end.
- Hold the detector tube firmly near the tube tip breaker and bend the tube toward you to break the tube tip.
- Confirm the pump handle is fully pushed in (therefore, the guide line on the pump shaft is not seen). Then insert the detector tube into the rubber inlet of the Pump with the arrow (▶) on the tube pointing toward the pump.
- Align the guide mark (red line) on the back plate and the guide mark (▲100 or ▲50 depending on the detector tube) on the handle.
- Direct the tube end to the point of measurement and pull out the handle fully (for 100mL sampling) or halfway (for 50mL sampling) along the guide line to the lock position.
- Wait until the sampling time has elapsed. The completion of the sampling of 100mL or 50mL can be confirmed by the flow finish indicator on the handle.

### Hints for detector tube reading

- When the end of the colour change layer is flat: Read the value at the end of the layer. In this example, the reading should be 5%.

- When the end of the colour change layer is slanted: Read the value in the middle of the slant. In this exaggerated example, the reading should be 5%.

- When the demarcation of the colour change layer is pale: Read the value in the middle between the dark layer end and the pale layer end. In this exaggerated example, the reading should be 5%.

### △ NOTE

Read instructions for your Gastec detector tube and model GV-100S carefully.

### Measurement procedure

- Write down the starting time of measurement on an adhesive label included inside each box of Dosi-tubes, and place the label onto the tube.
- Insert the G marked end of the Dosi-tube into the No.710 Tube Holder, and break the tube end at the breaking line (A). Remove the broken end from the Tube holder.

- Insert the Dosi-tube fully into the Tube holder.

- Attach the Tube Holder with the Dositube to the shirt collar for personal sampling, or put it on an appropriate measurement point in the workplace for area monitoring.

- When the measurement is finished, write down the finishing time on the label, and determine the actual sampling time :  
= (finishing time) - (starting time)

- Obtain the average concentration (TWA value) by the following formula.

$$\text{TWA value (ppm)} = \frac{\text{Dosi-tube reading (ppm} \cdot \text{hr)}}{\text{Actual sampling time (hr)}}$$

\* Refrigerated storage

The Gastec polytec system consists of the Model GV-100S Gas sampling pump and the Polytec tubes. The Polytec tubes are unique detector tubes, each having 1 to 7 reaction layers to determine multiple unknown substances in the sample simultaneously. When you pull the handle of the Pump and wait for a predetermined sampling time, the colour (s) of the Polytec tube's layer (s) change uniquely according to the contents of the sample. Four types of Polytec tubes are available: Polytec I (No.107), Polytec II (No.25), Polytec III (No.26), and Polytec IV (No.27). Detailed descriptions are given in the instruction sheets included with individual Polytec tubes. If you already have the Model GV-100S gas sampling pump, you need only to obtain the desired Polytec tubes.

## ■ Polytec II (No. 25)

## ■ Polytec III (No. 26)

## ■ Polytec IV (No. 27)

## ■ Polytec I (No. 107)

## Example :

## ■ Polytec IV (No. 27)

Sampling time: 30 seconds for 1 pump stroke (100ml)

Shelf life: 3 years

Reaction principle: See the table below

| Detecting layer                  |                   | No. Name (Original colour)                          | 1 NH <sub>3</sub> (Purple)                                                                         | 2 HCl (Yellow)      | 3 H <sub>2</sub> S (White)               | 4 SO <sub>2</sub> (Blue)                                                           | 5 NO <sub>2</sub> (White)                                                                                          | 6 CO (Yellow)                                              | 7 CO <sub>2</sub> (Blue)                               |

| Carbon dioxide               | CO <sub>2</sub>                                 | 2HT             | Carbon dioxide | 10-100%               | 20mL/20sec.     | White         | Purple         | 3                 |
| Propane                      | CH <sub>3</sub> CH <sub>2</sub> CH <sub>3</sub> | 100B            | Propane        | 0.1-2%                | 20mL/120sec.    | Brown         | Blackish Green | 3                 |

- ① Attach the syringe inlet to the syringe (No.601 or No.611) and collect 20ml of sample into the syringe by pulling its piston.

- ② Break off both ends of a detector tube (No.100B for No.601 syringe or No.2HT for No.611 syringe) by using the tube tip breaker.

- ③ Insert the tube securely into the syringe inlet with the arrow pointing away from the pump. Inject the sample collected in the syringe into the detector tube in 2 minutes (for No.100B) or 20 seconds (for No.2HT), and read the indication.

Dissolved substance in solution can be measured by simply immersing the above Gastec tube into a solution. When the detector tube is immersed vertically into (►) Pointing upward, the solution will rise up through the tube due to capillary action and react with reagent in the tube.

Gastec Airtec Tube allows anyone to simply, quickly, and quantitatively measure the quality of their compressed breathing air. Easy to use, the Airtec tube is an accurate and precise method for detecting CO, CO<sub>2</sub>, Water vapour, Nitrogen oxides and Oil mist. Using Airtec tube direct reading vapour tubes, simply connect the pressure reducer to your high pressure air source, compressor, cylinder, or air line and adjust the flowmetre to the required setting.

Operators often produce or are performed in the presence of harmful airborne contaminants. When self-contained breathing apparatus or other devices are used for respiratory protection, the quality of the breathing air requires special attention. Contaminants entering the compressor or contaminants generated by the compressor can be harmful to the worker and the respiratory equipment.

Airtec tube is a convenient economical system for testing the quality of your compressed breathing air. You do not have to learn how to operate and calibrate sophisticated instrumentation. With Airtec Tube, the measurement is quick and simple and does not require user calibration. Just snap off both "break away" ends of the tube, insert the tube into the tube holder with the directional arrow pointing down, and adjust the flowmetre to the specified flow rate. After the required time, note where the colour stain stops and take the measurement from the direct reading tube.

## ■ Measurement procedure: (a case of contaminant test in cylinder)

1. Install a pressure reducer with gauge and flowmetre to a cylinder, compressor or air line and adjust the flowmetre to the required setting.

2. Break tips off a fresh detector tube in the tube tip breaker and insert a tube into a tube holder.

3. Attach the rubber tube holder to the flowmetre outlet. Make certain the tube arrow **G** on the tube pointing in a down direction.

4. Turn on the cylinder or compressor and confirm the flowmetre according to each Airtec tube specifications.

5. Time the sampling time with a stopwatch.

6. As soon as sampling time has elapsed turn off the cylinder or compressor, and remove the tube from the tube holder and then read colour change layer immediately.

## Automatic gas sampling device GSP-300FT-2

The Model GSP-300FT-2 has been designed the smallest sampler available with an integrated flowmeter for hand-held, personal or site sampling gas sampler. This small size air sampler can be possible to carry on constant flow rate for 10 hours continuous sampling.

This sampler employs an extremely low noise air pump and automatic shut-off air pump by preset timer or volume for integrated flow rate and accumulated time.

### GSP-300FT-2 Specification

## Measuring Procedure

- Break tips off the detector tube by tube tip holder.

- Insert the detector tube to the inlet of the rubber tube holder.

- Put the power switch to ON. Adjust the flow rate, confirm the timer of the sampler is set, then push the start button.

- After sampling, remove the detector tube from the rubber tube holder and read the concentration of the tube.

\* Please read carefully the instruction sheet of the detector tube to be used for timer and flow rate.

**■ GASTEC NUMERICAL INDEX GAS DETECTOR TUBE LIST**

| Gastec Tube No. | Gas or Vapour to be Measured                        | Measuring Range (ppm)     |
|-----------------|-----------------------------------------------------|---------------------------|
| 1A              | Carbon monoxide (Airtec tube)                       | 5-50                      |
| 1HH             | Carbon monoxide                                     | 1-50%                     |

| 273             | Chromium( VI) Ion in Solution | 0.5-50mg/L            |
| 281             | Iron Ion in Solution          | 5-50mg/L              |
| 284             | Copper Ion in Solution        | 1-20mg/L              |
| 285             | Zinc in Solution              | 3-20mg/L              |
| 291             | Nickel in Solution            | 5-50mg/L              |

### ■ Storage and disposal of Gastec detector tubes

As detector tubes contain sensitive reagents that are ready to react, and some reagents might be corrosive, care should be taken for their storage and disposal.

#### ● Storage of detector tubes

To keep the high quality of Gastec detector tubes, it is necessary to store them in a cool (0 to 10°C (32 to 50°F), dark place (never expose them to the direct sunlight). Never store tubes above normal room temperature. Keep them in a safe place and out of reach of children.

#### ● Disposal of detector tubes

Used or date-expired detector tubes should be disposed properly in accordance with your local regulations. For further information, consult your Gastec representative.

### ■ Units of concentrations

% (Per cent)

Ratio of the volume of a substance to the volume of its medium expressed in percentage:

$$= \frac{\text{Volume of substance}}{\text{Volume of medium}} \times 100$$

ppm (parts per million)

Ratio of the volume of a substance to the volume of its medium expressed in parts per million:

$$= \frac{\text{Volume of substance}}{\text{Volume of medium}} \times 10^6$$

ppb (parts per billion)

Ratio of the volume of a substance to the volume of its medium expressed in parts per billion:

$$= \frac{\text{Volume of substance}}{\text{Volume of medium}} \times 10^9$$

mg/m<sup>3</sup> (milligrams per cubic metre)

Ratio of the weight of a substance expressed in mg to the volume of its medium of 1 m<sup>3</sup> (1,000L). This unit is mainly used for concentrations of particulate substances, but can also be applied to gases and vapours.

mg/L (milligrams per litre)

Ratio of the weight of a substance expressed in mg to the volume of its medium of 1L. This unit is mainly used for concentrations of particulate substances, but can also be applied to gases and vapours.

LB/MMCF (pounds per million cubic feet)

Ratio of the weight of a substance expressed in LB to the volume of its medium of 1,000,000 cubic feet.

$$1\text{mg/L} = 1000\text{mg/m}^3 = 1358\text{ppm} = 62.3\text{LB/MMCF (25°C, 1013hPa)}$$

### ● Relations between concentration units

$$\text{ppm} = \% \times 10,000$$

$$\% = \text{ppm} \times 0.0001$$

$$\text{ppb} = \% \times 10,000,000$$

$$\% = \text{ppb} \times 0.0000001$$

$$\text{mg/m}^3 = \text{ppm} \times \frac{M}{22.4} \times \frac{273}{(273+t)} \times \frac{P}{1013}$$

$$\text{ppm} = \text{mg/m}^3 \times \frac{22.4}{M} \times \frac{(273+t)}{273} \times \frac{1013}{P}$$

$$\% = \text{mg/L} \times \frac{22.4}{M} \times \frac{(273+t)}{273} \times \frac{1}{10}$$

$$\text{mg/L} = \% \times \frac{M}{22.4} \times \frac{273}{(273+t)} \times 10$$

Where :

M: Molecular weight

22.4 (L) : Volume of 1 mol at 0°C (32°F) under 1 atmospheric pressure

273 (°K) : °K represents an absolute temperature.  
0°C ≅ 273°K, t°C = (273 + t)°K

1013 (hPa) : 1 atmospheric pressure in hectopascal

P : Atmospheric pressure at the time of measurement in hectopascal

**Quantity of tubes per box:** 10 tubes each

### Tube No. & Name:

Gastec Detector Tube to be used.

### Measuring Range:

Measuring ranges can be obtained by multiple or half pump strokes taken.

### TLV:

Threshold Limit Value (TLV) for 2010 adopted by American Conference of Governmental Industrial Hygienists (ACGIH).

### TLV-TWA:

Threshold Limit Value-Time Weighted Average -the time-weighted average concentration for a normal 8-hour workday and a 40-hour workweek, to which nearly all workers may be repeatedly exposed, day after day, without adverse effect.

### TLV-C:

The concentration that should not be exceeded during any part of the working exposure.

### Note:

- T Tubes need a temperature correction factor or table for the true concentration.
- H Tubes need a humidity correction factor or table for the true concentration.
- + Five tests (tubes) per box. Twin tubes to be combined with primary and analyzer tubes.
- ++ Nine tests (tubes) per box.
- M Tube 121SP Benzene tube in the mixture of other Hydrocarbons.
- ⊕ Five tests (tubes) and long size glass detector tube for tube 31B only.

### Shelf Life (year):

Actual shelf life (the term of validity) is printed on the tube box in final inspection process.

### Refrigerated Storage:

\* Tubes to be stored at 10°C (50°F) or below.

### No. of Pump Strokes:

Number in circle means standard pump strokes.

One ① stroke of the sampling pump draws a 100ml air sample. One half ①/2 pump strokes draw a 50ml air sample.

### Correction factor/chart:

Mesh means a correction factor or chart for the true concentration which is enclosed with each box of detector tubes.

Detector tubes are primarily designed to measure specific gases. But it is also possible to measure other substances of similar chemical properties with the aid of a correction factor or chart. A correction factor is a figure which is multiplied by the concentration interpreted from the colour starting on the detector tube. The correction may also be presented as a chart on tube if the correction relationship is nonlinear. Therefore, please make use of the correction factor/chart measuring ranges as a reference. Moreover, this factor may vary slightly between production batches. For a more precise factor please contact your Gastec distributor.

### Tube 72P

Tube No.72P works directly off regulated residential LP gas line pressure.

### Warning

1. Use only Gastec detector tubes in a Gastec Pump.
2. Do not interchange or use non-Gastec parts or components in Gastec's detector tube and pump system.
3. The use of non-Gastec parts or components in Gastec's detector tube and pump system or use of a non-Gastec detector tube with a Gastec pump or use of a Gastec detector tube with a non-Gastec pump may result in property damage, serious bodily injury, and death; voids all warranties; and voids all performance and data accuracy guaranties.
