# D-GUARD²R

INSTRUCTION MANUAL

1 Introduction

The D-Guard²R is a single gas fixed detector with a large range of available sensors and an easy to use interface. The D-Guard²R features alarm relays
Figure 1. D-Guard²R.

2 Method of Operation

The D-Guard²R detects toxic or flammable gas and can interface with external equipment to trigger alarms or operate additional equipment. The D-Guard²R can be fitted with an oxygen sensor to measure the oxygen concentration in the environment.

The D-Guard²R detects gas via diffusion to the sensor at normal atmospheric pressure.

3 For Your Safety

Warning: **Do not make changes to this D-Guard²R without the express written permission of Gastech Australia Pty Ltd. Changes that are not approved can cause death or injury to personnel.**

4 Further Information

Please tell us if you want help with this equipment.

Head Office: Gastech, 24 Baretta Road, Wangara, WA 6065, Australia.

5   List of Figures

6   Keywords and Symbols Used in This Manual

Symbol	Keyword	Description
No Symbol	Warning	Warning: Do not (warning text). Can cause injury or death to personnel.
No Symbol	Caution	Caution: Do not (caution text). Can cause damage to parts or equipment.
	Service tool	Combined magnetic wand and hex key service tool
	Calibration plug	Calibration adapter
No Symbol	Full Scale	The user selectable range of the detector. This cannot exceed the maximum range of the sensor.
No Symbol	Suppression Band	The suppression band prevents the D-Guard²R from displaying small changes in the detected gas level close to zero.
No Symbol	Sensor Gain	The sensor gain adjusts the amplification of the sensor output.
No Symbol	AL1	User configurable Alarm 1
No Symbol	AL2	User configurable Alarm 2
No Symbol	IP	Ingress Protection Rating

Figure 2.   Keywords and symbols used in this manual.

7   Intended use

The D-Guard^{2}R is designed as a fixed gas detector with a 4-20 mA current loop output. The detector can interface with external equipment to transmit gas levels and trigger external alarm devices.

Warning: **The D-Guard^{2}R detects toxic and flammable gases and oxygen concentrations. These gases can cause injury or death to personnel.**

Warning: **The D-Guard^{2}R is not a personal gas detector. If you do not use a personal gas detector this can cause injury or death to personnel.**

Warning: **Do not use the D-Guard^{2}R in an explosive or oxygen rich atmosphere. An explosion can cause injury or death to personnel.**

8   Safety Precautions

Warning: **You must obey all caution and warning statements in this instruction manual. Failure to obey can result in injury or death to personnel.**

Warning: **You must do a response test before first use. Incorrect calibration can result in injury or death to personnel.**

9   Models covered by this instruction manual

Caution: **This manual is intended for the non-certified general version of the D-Guard^{2}R. Do not use this manual for other models in our range.**

Please refer to the <u>D-Guard^{2}R Versions</u> for a list of all models covered by this manual.

10 What is in the Box?

Item	Description
	D-Guard²R gas detector
	D-Guard²R Service Tool. The service tool activates the internal menu magnetic sensors and includes an integrated 4mm hex key to open the enclosure.
	The Quick Start Guide (QSG) provides a brief overview of the installation and operation of the D-Guard²R gas detector.
	Calibration Certificate. The D-Guard²R is factory calibrated before dispatch.
	Calibration plug

Figure 3.　List of supplied items.

11 Installation Information

Warning: The D-Guard²R must be installed by an approved person. Incorrect installation can cause injury or death to personnel.

11.1 D-Guard²R Mechanical Installation

The D-Guard²R should be mounted vertically to a suitable flat surface. Make sure the cable gland faces the ground. Use the two mounting eyes with M6 fasteners suitable for the surface type. Make sure the data plate, on the right hand side, remains visible after installation.
Figure 4. D-Guard²R mounting dimensions in millimetres.

Caution: Do not over tighten the M6 fasteners as this can cause distortion of the enclosure.

Caution: Water or dust on the Splash Guard can interfere with gas detection.

12   Electrical Installation

Warning: **The D-Guard²R must be installed by an approved person. Incorrect installation can cause injury or death to personnel.**

Socket Head Cap Screws

Socket Head Cap Screws
Step 1.   Loosen the 4 screws holding the top case on.
Step 2.   Open the D-Guard²R enclosure.
Step 3.   Connect the D-Guard²R as shown. The DC supply voltage is 13 - 28 V.

Step 4.   You must use suitable cable. Refer to the Wiring Specifications.

Rev 1: 2023-07-28   Item Number 201025

13   Response Test

Warning: **You must do a response test before first use. Incorrect calibration can result in injury or death to personnel.**

The D-Guard²R has been calibrated before dispatch.

The D-Guard²R must be response tested when it is first commissioned and as necessary during use.

Step 1.   Apply gas to the D-Guard²R.

Step 2.   Apply the gas for at least 3 minutes or until the indicated concentration is within ±10% of the applied gas concentration. Gas flow rate must be greater than or equal to 1L/min.

Caution: **You must recalibrate the D-Guard²R if its results do not agree with this specification. Go to the Calibration menu.**

14 Operation

The D-Guard²R menu system is controlled by the D-Guard²R Service Tool (supplied). Four magnetic sensors, located behind the display window, are activated by the Service Tool. The four marks on the D-Guard²R display match the magnetic sensor positions.

The menu system uses custom icons and text to give information to the user. To access a function, use the Service Tool on the magnetic sensor that is next to the icon displayed on the screen.

Note: If an icon is not shown, that adjacent magnetic sensor has no function on that screen.

Figure 5. Arrows show magnetic sensor positions.

14.1   Power up

Connect power to D-Guard²R and energise the unit.
Figure 7.   D-Guard²R splash screen.
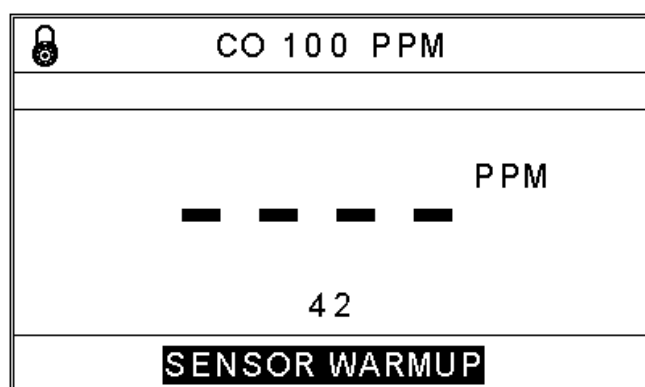

Figure 8.   D-Guard²R at sensor warm up.
Figure 9.   D-Guard²R normal operating screen.

Caution: **You must wait 30 minutes for the D-Guard²R to become stable. You can calibrate it after 30 minutes.**

Caution: **Some sensors may need up to 24 hours to become stable before calibration is tried.**

14.2   Home screen features

The home screen is the main display that will be visible. It shows the installed gas sensor, range and the current reading. System alerts are displayed at the bottom.

```
Step 5.   The menu is unlocked.

Caution: If you forget the passcode, you must return the D-Guard²R to a Gastech Service Centre.

15 Calibration

The D-Guard^{2}R is factory calibrated before dispatch. You must calibrate the D-Guard^{2}R regularly. Calibration adjusts the response of the D-Guard^{2}R to known concentrations of gas at two points, zero and span.

Zero calibration uses zero-grade air or fresh air, which does not contain any trace of the detectors intended target gas. You can set the concentration of zero calibration gas.

Span calibration uses a known concentration of the intended target gas. You can set the concentration of span calibration gas.

> **Warning:** Use the calibration plug for each calibration or bump test. Incorrect calibration can result in injury or death to personnel.

15.1 Go to the calibration menu

Make sure the menu screen is unlocked.

Put the Service Tool over the magnetic sensor location closest to the gas cylinder icon for one second to access the calibration menu.
Step 1. Use 🛢 to enter the calibration menu.
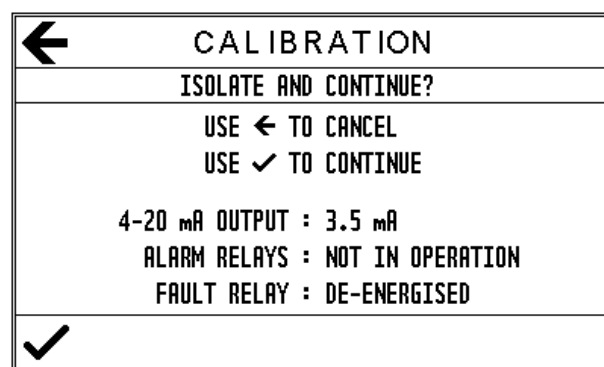

Step 2. Use ✓ to continue or ← to go back.
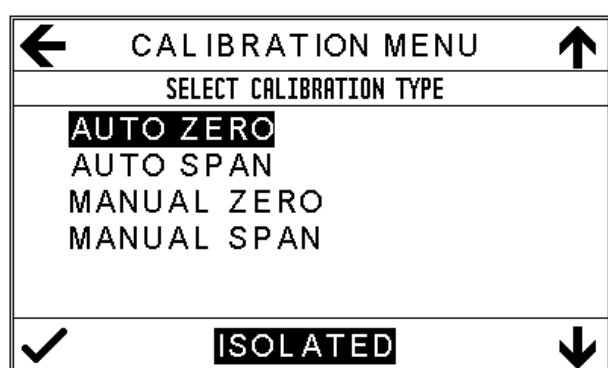

Step 3. Calibration menu.

> **Note:** If CANCEL was selected, the D-Guard^{2}R will auto lock after a ten second delay.

> **Warning:** A competent person must calibrate the D-Guard^{2}R. Incorrect calibration can cause injury or death to personnel.

15.2   Attach the calibration gas to the D-Guard²R

The D-Guard²R is a normally aspirated gas detector that operates at normal atmospheric pressure. A calibration plug is provided to make sure that gas is applied correctly to the sensor.

Step 1.   Remove the splash guard.

Step 2.   Fit the calibration plug.

Step 3.   Attach tubing to the calibration plug.

Step 4.   Use a 1L / min fixed flow regulator.

15.3   Calibration Modes

The D-Guard²R has two calibration modes, Auto and Manual.

The Auto calibration mode checks that the rate of change of the detected gas has decreased to less than ± 0.1% of full scale per second, and adjusts the D-Guard²R response automatically.

The Manual calibration mode allows the user to adjust the D-Guard²R calibration when the response has stabilised.

Use the Trend Bar to determine when the rate of change of the detected gas has decreased to less than ± 0.1% of full scale per second.

15.4   Calibration Trend Bar

The D-Guard²R has a trend bar to show the detected rate of change of the applied gas. The trend bar has seven different positions and provides a clear visual indication of the rate of change of the detected gas concentration levels.

Trend Bar State	Concentration	Percentage full scale Rate of change / second
	Falling	> 3%
	Falling	1% < x ≤ 3%
	Falling	0.1% ≤ x ≤ 1%
	Stable	< ± 0.1%
	Rising	0.1% ≤ x ≤ 1%
	Rising	1% < x ≤ 3%
	Rising	> 3%

Figure 13.   Trend Bar states.

Warning: A competent person must calibrate the D-Guard²R. Incorrect calibration can result in injury or death to personnel.

15.5   Auto Zero Calibration.

Auto zero calibration is part of the Calibration menu.

> **Note:**   Fresh air can be used in place of zero-grade air.
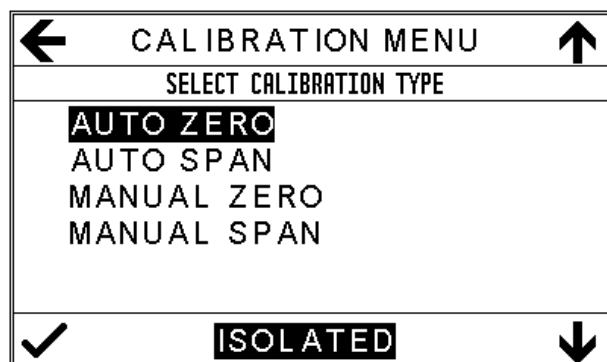

Step 1.   Use ✔ to go into the auto zero calibration.

Step 2.   Apply the correct gas. Use ▶ to start.

Step 3.   Use 💾 to save or ← to cancel.

Step 4.   Use ← to go back or ✔ to continue.

> **Caution:**   You must monitor the alarm states before you exit the calibration menu. Alarms can remain active until the calibration gas has been removed from the sensor.
Step 5.   Use ✔ to go back or ← to cancel.
Step 6.   Calibration completed.

> **Note:**   The D-Guard²R Auto Calibration mode determines when the rate of change of the applied gas has decreased to less than ± 0.1% of full scale per second.

> **Warning:**   A competent person must calibrate the D-Guard²R. Incorrect calibration can result in injury or death to personnel.

15.6 Auto Span Calibration

Auto span calibration is part of the Calibration menu.
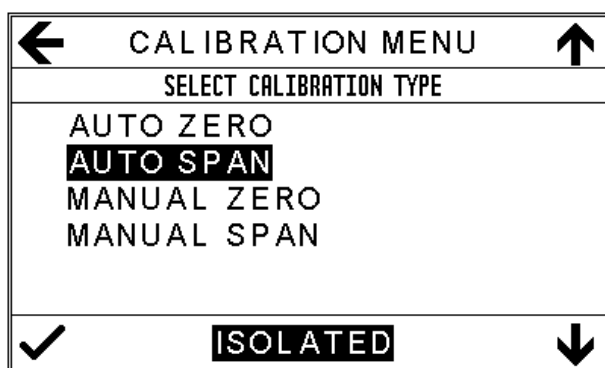

Step 1. Use ✔ to go into the auto span calibration.
Step 2. Apply the correct gas. Use ▶ to start.

Step 3. Use 💾 to save or ← to cancel.

Step 4. Use ← to go back or ✔ to continue.

Caution: You must monitor the alarm states before you exit the calibration menu. Alarms can remain active until the calibration gas has been removed from the sensor.
Step 5. Use ✔ to go back or ← to cancel.
Step 6. Calibration completed.

Note: The D-Guard²R Auto Calibration mode determines when the rate of change of the applied gas has decreased to less than ± 0.1% of full scale per second.

Warning: A competent person must calibrate the D-Guard²R. Incorrect calibration can result in injury or death to personnel.

15.7   Manual Zero Calibration

Manual zero calibration is part of the Calibration menu.

Note: **Fresh air can be used in place of zero-grade air.**

Note: **The D-Guard²R Trend Bar is used to determine when the rate of change of the applied gas has decreased to less than ± 0.1% of full scale per second.**
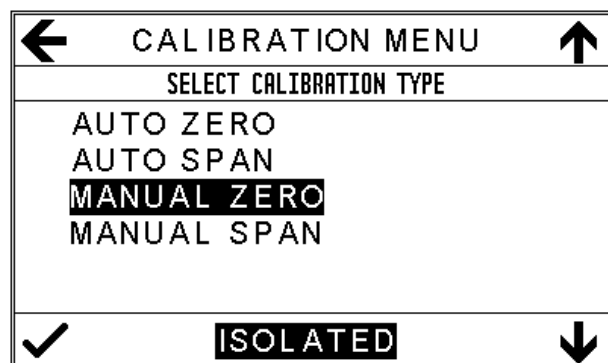

Step 1.   Use ✓ to go into the manual zero calibration.
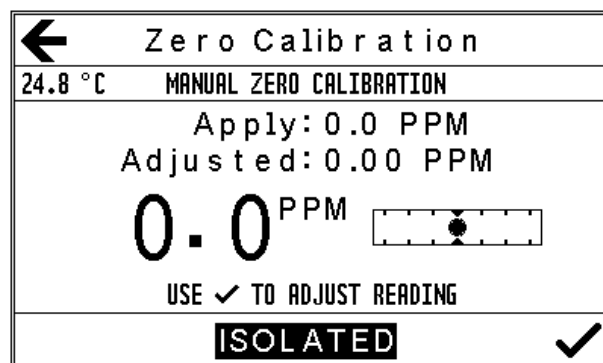

Step 2.   Apply the correct gas. Use ▶ to adjust.
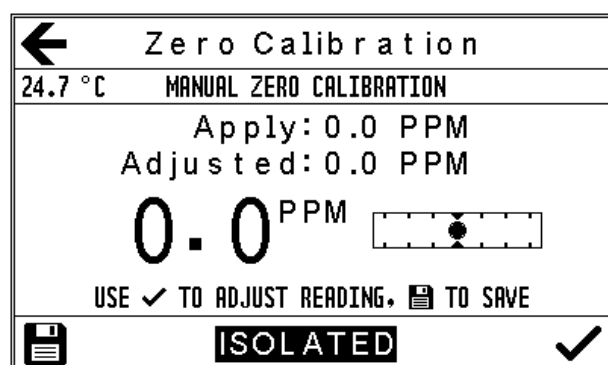

Step 3.   Use ✓ to adjust or 💾 to save.
Step 4.   Use ⬅ to go back or ✓ to continue.

Step 5.   Use ✓ to go back or ⬅ to cancel.
Step 6.   Calibration completed.

Warning: **A competent person must calibrate the D-Guard²R. Incorrect calibration can result in injury or death to personnel.**
15.8   Manual Span Calibration

Manual span calibration is part of the [Calibration menu](#).

Note: **The D-Guard²R Trend Bar is used to determine when the rate of change of the applied gas has decreased to less than ± 0.1% of full scale per second.**

19   Alarm Settings

You can configure the D-Guard²R alarms. The D-Guard²R has two alarms: Alarm 1 (AL1) and Alarm 2 (AL2).

All alarm settings can be configured independently of each other.

19.1   Go to the Alarm Settings menu

Make sure the menu system is unlocked.
Step 1.   Use 🛠 to go into the settings menu.
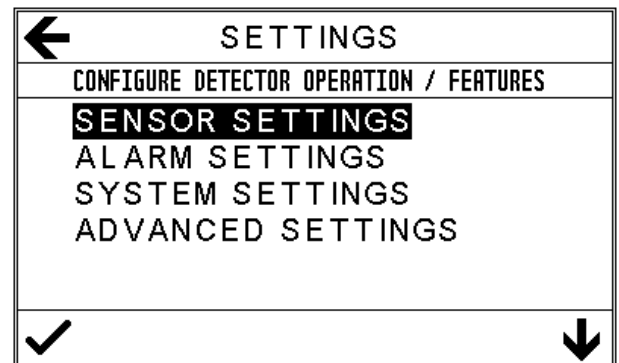

Step 2.   Use ⬇ to highlight the alarm settings.
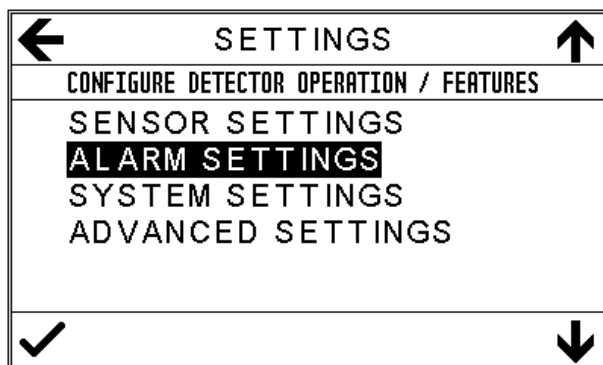

Step 3.   Use ✔ to go into the menu.
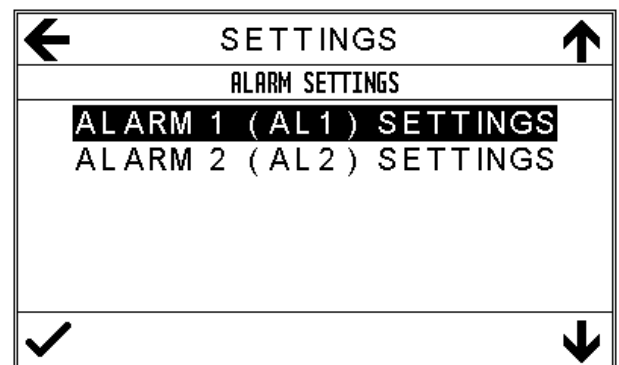

Step 4.   Use ⬇⬆ then ✔ to continue.

19.2   Alarm Direction

The alarm direction setting is part of the Alarm Settings Menu.

Caution: **You can set the alarm direction for each alarm independently. The options are rising or falling.**

```
┌──────────────────────────┐          ┌──────────────────────────┐

```
Step 3.   Use ↓↑ then 💾 to apply.
Step 4.   Use ← to go back or ✔ to continue.

19.3 Alarm Level

The alarm level setting is part of the Alarm Settings Menu.

Step 1. Use ← to go back or ✔ to continue.

Step 2. Use ↓↑ to highlight the level menu.

Step 3. Use ✔ to go into the level menu.
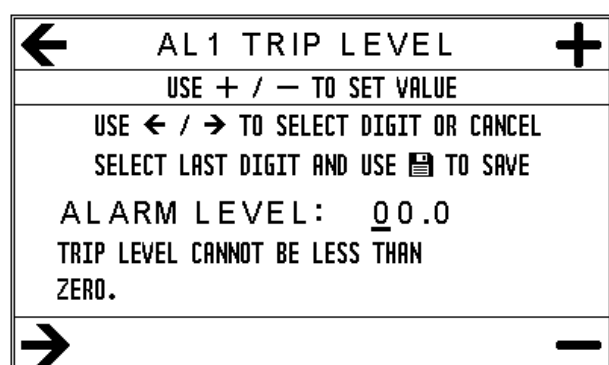

Step 4. Use + — to adjust then 💾 to save.

Caution: You must not try to set an alarm level that is less than zero or greater than the full scale. The D-Guard²R will show these errors.
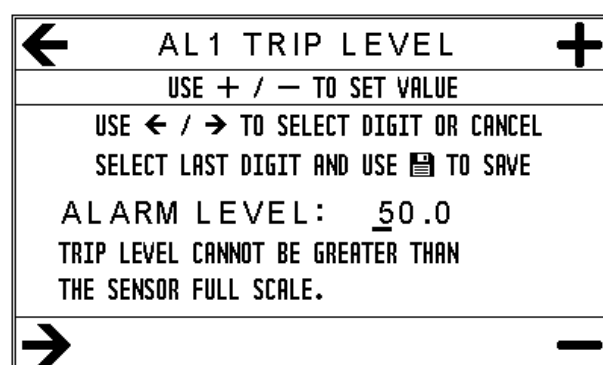

Figure 18.   Minimum alarm level warning.

Figure 19.   Maximum alarm level warning.

19.4   Alarm Relay state

The D-Guard²R version has two user configurable relay outputs. You can adjust the initial state of the alarm relays. The options are de-energised or energised.
The D-Guard²R has an additional fault relay. This is not user configurable.

The alarm relay state setting is part of the Alarm Settings Menu.
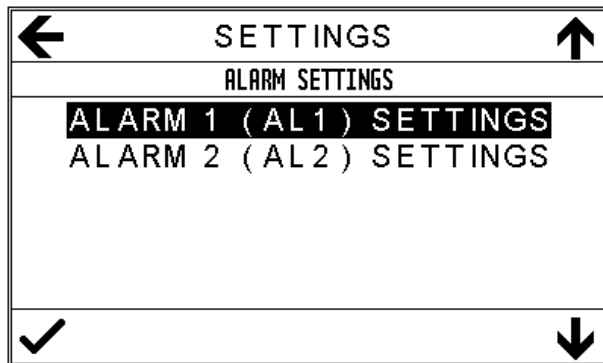

Step 1.   Use ⬅ to go back or ✔ to continue.
Step 2.   Use ⬇⬆ to highlight the relay menu.
Step 3.   Use ✔ to go into the relay menu.

Step 4.   Use ⬇⬆ to adjust then 💾 to apply.
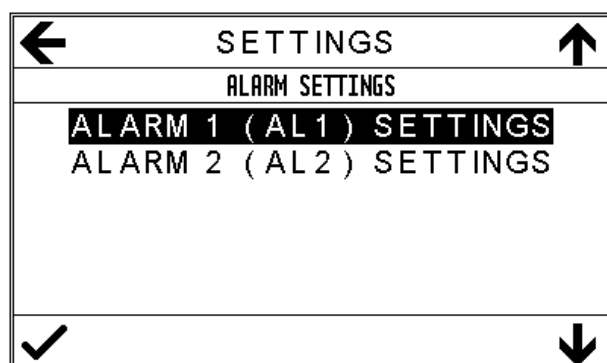

Step 5.   Use ⬅ to go back or ✔ to continue.

19.5 Alarm Latch

The D-Guard²R alarms can be set as latching alarms (LATCH: ENABLED) or as non-latching alarms (LATCH: DISABLED).

The alarm latch setting is part of the Alarm Settings Menu.

Step 1. Use ← to go back or ✔ to continue.

Step 2. Use ↓↑ to highlight the latch menu.

Step 3. Use ✔ to go into the latch menu.

Step 4. Use ↓↑ to adjust then 💾 to apply.

Step 5. Use ← to go back or ✔ to continue.

19.6 Latched Alarm Examples

Caution: You must <u>clear the latched alarm</u> manually. Alarms will not reset automatically when the detected gas concentration has fallen below the set alarm level.
Figure 20. AL1 and AL2 Latched.
Figure 21. AL1 Latched.
Figure 22. AL2 Latched.

20   System Settings

You can configure the Passcode. You can isolate the D-Guard²R if required.

20.1   Access the System Settings

Make sure the menu system is unlocked.
Step 1.   Use ⚒ to go into the settings menu.
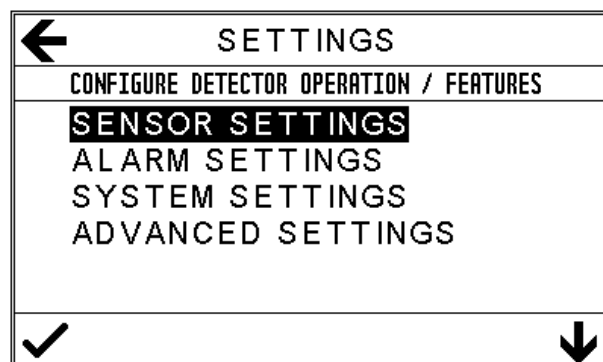

Step 2.   Use ⬇⬆ to highlight the system settings menu.
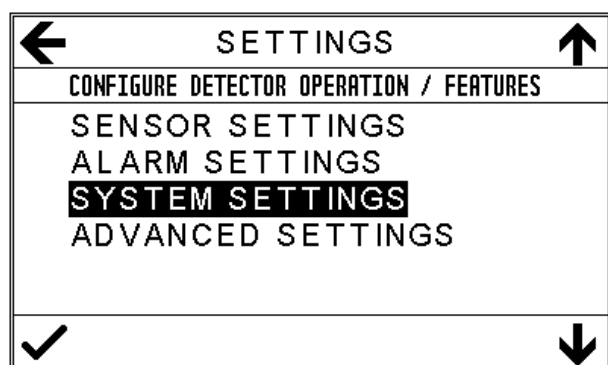

Step 3.   Use ✔ to go into the menu.
Step 4.   Use ⬅ to go back or ✔ to continue.

20.2   Isolate

You can isolate the D-Guard^{2}R if required. The 4-20mA output will be set to 3.5mA when isolated.

The isolate setting is part of the System Settings menu.
Step 1. Use ✔ to go into the isolate menu.	Step 2. Use ⬇⬆ to adjust then 💾 to apply.
Step 3. Use ← to go back.	Step 4. Use ← to go back.
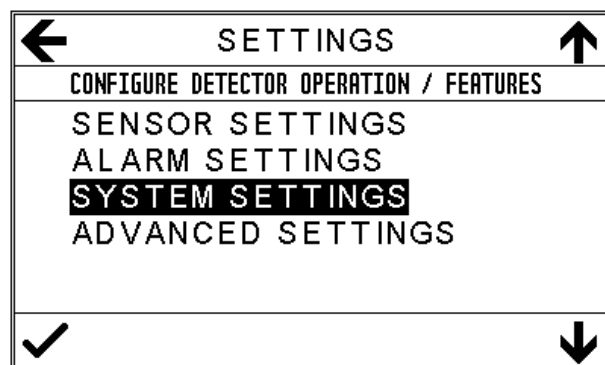

Warning: **The D-Guard^{2}R does not transmit detected gas concentrations when isolated. This can result in injury or death to personnel.**
Figure 23.   D-Guard^{2}R home screen when isolated.

Caution: **When the D-Guard^{2}R is isolated the 4-20mA output is set to the fault current of 3.5mA. The screen will show the detected level of gas. External control equipment will not receive gas concentration readings.**

20.3   Set Passcode

You can set the D-Guard²R passcode. The passcode limits access to the configuration and operation of the D-Guard²R.

The passcode settings are part of the System Settings menu.

SETTINGS SYSTEM SETTINGS ISOLATE **PASSCODE**	**SETTINGS** PASSCODE SETTINGS **SET PASSCODE** DISABLE PASSCODE
Step 1.   Use ✔ to go into the passcode menu.

Step 2.   Use ⬅ to go back or ✔ to continue.

PASSCODE SETTINGS
SET PASSCODE
DISABLE PASSCODE
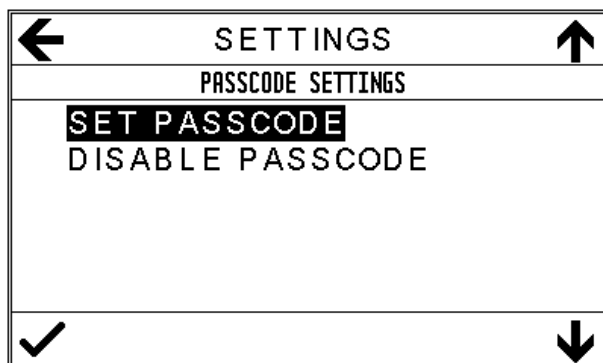

Step 5.   Use ⬅ to go back or ✔ to continue.

Caution: If you forget the passcode, you must return the D-Guard²R to a Gastech Service Centre.

20.4   Disable Passcode

You can disable the D-Guard²R passcode. The passcode limits access to the configuration and operation of the D-Guard²R.

The passcode settings are part of the System Settings menu.
Step 1.   Use ✔ to go into the passcode menu.
Step 2.   Use ⬇⬆ to highlight the disable passcode menu.
Step 3.   Use ✔ to go into the disable passcode menu.
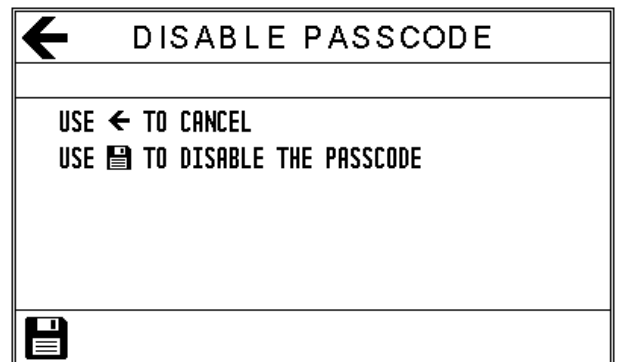

Step 4.   Use ⬅ to go back or 💾 to disable the passcode.

Caution: **If you forget the passcode, you must return the D-Guard²R to a Gastech Service Centre.**

21 Advanced Settings

You can configure the D-Guard²R advanced settings.

21.1 Go to the Advanced Settings Menu

Make sure the menu system is unlocked.
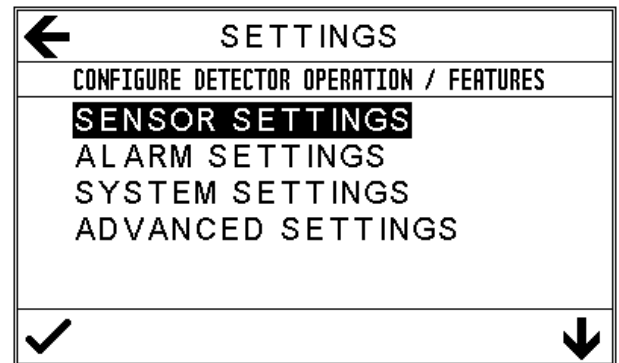

<table>

Step 5.   Use ✓ to toggle or ⬇⬆ to select the relay.
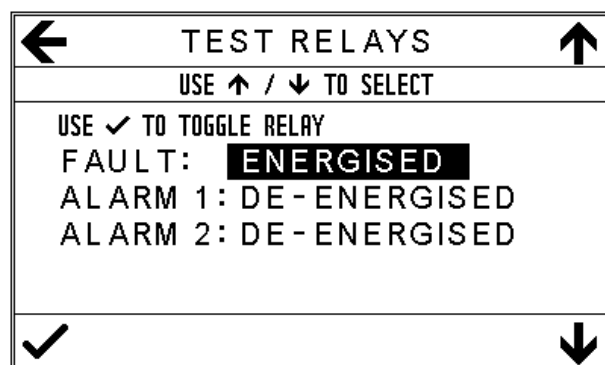

Step 6.   Use ← to go back.

21.5   Reset Sensor Life

You can reset the D-Guard²R estimated life of the fitted sensor. You must reset the Sensor Life setting when a replacement sensor is fitted.

The reset sensor option is part of the Advanced Settings menu.

```
┌──────────────────────────────┐     ┌──────────────────────────────┐
│ ←     SETTINGS           ↑    │     │ ←     SETTINGS           ↑    │

└──────────────────────────────┘     └──────────────────────────────┘
```
Step 3.   Use ✓ to go into the reset sensor life menu.

Step 4.   Use 💾 to reset the sensor life.

```
┌──────────────────────────────┐
│ ←     SETTINGS           ↑    │
│      ADVANCED SETTINGS      │
│ SYSTEM CALIBRATION           │
│ SYSTEM TESTS                 │
│ RESET SENSOR LIFE            │
│ LOAD SENSOR PRESET          │
│                              │
│ ✓                      ↓    │
└──────────────────────────────┘
```
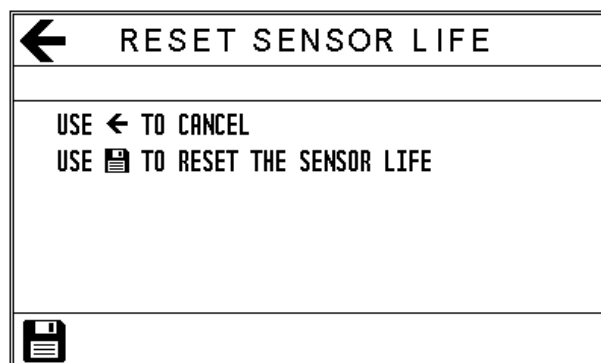

Step 5.   Use ← to go back.

Note: The D-Guard²R calculates the life of the sensor by comparing the most recent calibration data with the original stored calibration data.

Caution: The Sensor Life value is for indication purposes only. It can be viewed on the information screen.

21.6 Sensor Presets

You can use this menu to load one of the D-Guard^{2}R sensor presets.

The sensor presets are part of the Advanced Settings menu.
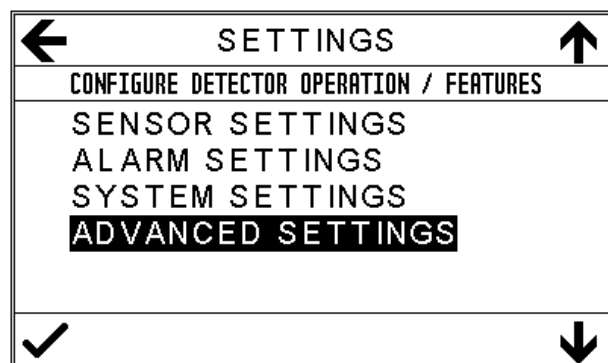

Step 1.   Use ✔ to go into the advanced settings menu.
Step 2.   Use ⬇ to highlight the load sensor preset menu.
Step 3.   Use ✔ to go into load sensor preset menu.
Step 4.   Use ⬅ to go back or ✔ to load preset.
Step 5.   Use ⬅ to go back.

Warning: **If the Sensor Preset is changed the D-Guard^{2}R must be re calibrated before use. Incorrect calibration can result in injury or death to personnel.**

22 Error Codes

Go to the Status screen to view any active errors.

Code	Code Description
01	CALIBRATE ZERO
02	CALIBRATE SPAN
03	CALIBRATE 4mA
04	CALIBRATE 20mA
07	ADC OVER RANGE
08	ADC UNDER RANGE
09	SENSOR OVER RANGE
10	SENSOR UNDER RANGE
11	OVER TEMPERATURE
12	UNDER TEMPERATURE
13	SENSOR END OF LIFE
14	SENSOR FAULT
15	CALIBRATE AMBIENT °C
16	NOT CONFIGURED
17	SENSOR NOT READY
18	SENSOR WARM-UP
19	ISOLATED

Figure 24.   Error codes.

23 4-20mA Output Fault Conditions

The D-Guard²R has two fault currents.

Current Output	Code Description
3.5 mA	Fault or Isolated
21 mA	Over range

Figure 25.   4-20 mA output loop fault currents.

24 Specifications

Specifications are subject to change without notice.

24.1 Enclosure Specifications
Figure 26. D-Guard²R dimensions in millimetres (front view).

24.2   Mechanical Specifications

Parameter	Description	Specifications	
Enclosure material	Polyoxymethylene		
Enclosure construction	Injection molded		
Enclosure wall section	Wall thickness	6.5mm	7mm
Enclosure IP rating	IP66 & IP67/68		
Enclosure lid Retainer	Not retained		
Enclosure lid fixing	Four screws M5x12		
Cable gland	M20 Cable Gland IP68		
Enclosure footprint	Including mounting supports	147mm high	160mm wide

Figure 28.   D-Guard²R Mechanical specifications.

24.3   Environmental Specifications

Parameter	Description	Specifications	
Storage temperature	Non-powered state	-20°C	60°C
Operating temperature	Temperature limits	-20°C	55°C
Operating humidity	Non-condensing	15%rh	90%rh
Operating pressure	Standard sea-level pressure 101 kPa	-10%	+ 10%

Figure 29.   D-Guard²R Environmental specifications.

24.4   General Specifications

Parameter	Description	Limits	
Measurement technique	Electro chemical cell, infra-red		
Target gas	List of available gas types		
Full scale range	List of ranges by gas types		
Maximum loop current	Under any condition		25 mA
Minimum supply voltage	General, Relay and Siren versions	13 V	
Maximum loop resistance	At a supply voltage of 22 V		380 Ω
Maximum supply voltage	General, Relay and Siren versions		28 V
Loop error signal	Isolated or fault		3.5 mA
Loop error signal	Over range		21 mA
Display	Graphical display 400x240 pixels		

Figure 30.   D-Guard²R Specifications.

24.5   Wiring Specifications
Figure 31.   D-Guard²R Electrical connections.

Caution: The outside diameter of the cable must be between 10 mm and 14 mm. Use a twin core shielded cable. Make sure the cable is sealed by the M20 cable gland to prevent moisture ingress.

Caution: You must use a circular cross-section cable. Non-circular cross-section cables can leak between the sheath and the cable gland.

28 Maintenance

The D-Guard^{2}R must be included in your sites regular maintenance program.

28.1 Calibration Interval

Make sure the D-Guard^{2}R is calibrated regularly. Gastech recommends at least every six months.

28.2 Cleaning

Figure 38.   Splash Guard.

Step 1.   Remove the Splash Guard from the D-Guard^{2}R.

Step 2.   Use a brush to remove any debris.

Step 3.   Wash the Splash Guard in potable water.

Step 4.   Wipe the outside of the D-Guard^{2}R with a cloth dampened with potable water only.

Step 5.   Refit the Splash Guard.

Caution: Make sure the Splash Guard is dry before use.

Caution: Do not use solvents to clean the D-Guard^{2}R. Solvents can damage sensors.

28.3 Visual Inspection

Step 1.   Make sure all fasteners and cable glands are secure.

Step 2.   Inspect the inside of the D-Guard^{2}R for moisture ingress. Replace the main seal as required.
